Complex just became comfortable.

DENTRIX ENTERPRISE

Connecting Unlimited Potential to Unlimited Growth

A growing dental organization needs practice management software to support its goals—not limit them. Enterprise software needs to make complexity comfortable—not confining. Dentrix® Enterprise™ is a smart investment because it's specifically made for the needs of large-group and multisite dental practices.

More importantly, it's made to grow.

Manage Efficiently

Dentrix Enterprise increases office efficiency by unifying all sites into one database. Robust and scalable, the database handles all dental offices—as many unique providers and sites as needed.

Each site can operate independently while sharing information stored on the central server. All sites save time because common tasks such as scheduling and billing are managed centrally.

DATA PROTECTION

Help protect patient data as part of compliance efforts with a Microsoft SQL server in a self-contained network. Assign password protection and user rights, and easily track edits, thanks to a comprehensive audit trail.

SCHEDULING

Reduce costs and improve efficiency by viewing any schedule any time, with the proper permissions. Appointments can be scheduled at the point of care or from a central location. Staff members can fill schedule holes by viewing and scheduling for all providers and sites. A detailed transaction log tracks all appointment data.

CONTINUING CARE

Save time and lower costs with centralized management of continuing care. Track the continuing care status of patients centrally while scheduling regular checkups

by location. Automatically update recall dates at procedure completion, regardless of location.

BILLING AND COLLECTIONS

Decrease the number of delinquent accounts with centralized collections. Patients have only one account—no matter how many sites they visit—and only one balance to manage.

Give each site more time to work with patients by moving all billing functions—such as monthly statements, account collections and insurance claim processing—to a central office.

ACCURATE TREATMENT PLANS

Confidently work the outstanding treatment list and give patients the care they need, regardless of location. Dentrix Enterprise ensures accurate treatment plans for every patient. A single, central treatment plan is updated automatically when work is completed at any site.

Increase Profitability

Dentrix Enterprise creates economies of scale, simplifies complex environments and lowers expenses for large-group and multisite dental practices.

Data centralization is only the beginning. Dentrix Enterprise also enables revenue cycle management: The process of managing insurance claims, payments and revenue generation. RCM includes determining insurance eligibility, collecting copays and properly coding claims.

CENTRALIZED BILLING AND ACCOUNTING

Streamline accounting functions as well as line item accounting for all locations. Effectively bill and collect payments for a variety of situations unique to multisite practices. Dentrix Enterprise increases the speed and accuracy of collections, resulting in faster return on investment, practice growth and new revenue development.

CENTRALIZED INSURANCE PROCESSING

Save staff time by processing insurance claims at a central site. Submit claims, determine a patient's insurance eligibility, collect copayments, process checks, properly code claims and more. Create and send batch insurance claims for all locations and providers. Dentrix Enterprise simplifies and streamlines the entire insurance process and even helps you get paid faster, since electronic claims can shorten reimbursement time significantly.

CENTRALIZED REPORTING

Automatically gather operations data from all sites on a regular basis. Easily create custom reports from the Microsoft SQL database. See how a provider is performing by site, or how a site is performing compared to others. Create reference reports, management reports, ledger reports, revenue analysis reports and more. All reports are customizable for the practice or the individual site.

Connect It All

Bringing people, places and data together into one central system is what Dentrix Enterprise does best. It helps standardize front office, operations, accounting and clinical procedures for the entire organization. Standard procedures—for every site and staff member—promote efficiency and lower costs, and improve patient care.

SINGLE PATIENT RECORD

Give patients and providers unlimited flexibility with calendars, locations and treatment options. With only one dental record, a patient can be seen at any site, by any provider, as often as needed. The patient's health history and up-to-date treatment records are available at any site.

SINGLE PROVIDER RECORD

A single provider record lets staff members treat patients at any site and allows providers the freedom to work where the need is greatest. The system automatically delivers the data and tools they need to wherever they're working.

COMPLETE OFFICE AUTOMATION

Go paperless with electronic dental records, clinical notes, examination forms, medical histories and images. A powerful search engine lets staff members find the data they need instantly—from any site. Appointment scheduling, billing, insurance claim processing and more can all be done electronically—no paper required. This gives the practice unlimited storage space for documents and reduces paper-based office costs.

FAMILIAR INTERFACE

Flatten the learning curve with the most recognizable user interface in dentistry. Employees familiar with market-leading Dentrix software can quickly master Dentrix Enterprise using the tools they already know.

INNOVATIVE TECHNOLOGY

Take advantage of the latest technology from Dentrix Enterprise partners. Leading vendors such as Demandforce, DEXIS, MiPACS, Axia, OneMind, Updox and more offer innovative products that work with Dentrix Enterprise for large-group and multisite dental practices.

Get Comfortable

Dentrix Enterprise can be configured to fit the business model and growth needs of each organization. In addition, Henry Schein offers training, custom programming services and eServices to make your staff more productive.

MATCH THE BUSINESS MODEL

Dentrix Enterprise can be configured and extended to match the business model and growth of large-group and multisite dental practices. In addition, Henry Schein Practice Solutions offers custom programming services and eServices that add functionality to Dentrix Enterprise.

ADD EFFICIENCY WITH WEB SERVICES

Electronic insurance claims, electronic billing statements and integrated web-based eServices that are constantly expanding can improve practice efficiency by automating office tasks.

JOIN THE DENTRIX ENTERPRISE COMMUNITY

Technical support, customer service plans, user conferences and training events help practices get the most out of their software. The Dentrix Enterprise Resource Center provides 24/7 technical information, on-demand training videos, product manuals and troubleshooting tips.

REDUCE I.T. HASSLES

Henry Schein TechCentral provides technology solutions to fit enterprise business needs, such as hardware, software, digital radiography, telecommunications, system configuration and installation.

OFFSET SOFTWARE COSTS

Qualify for federal stimulus funds offered by the Medicare and Medicaid EHR Incentive Programs. Eligible dental practices may offset their software costs by demonstrating meaningful use of electronic health records. Dentrix Enterprise is on the Certified Health IT Product List for this reason.
